### **Abstract**

An important measure of an innovation is the ease of replication and achievement of the same positive outcomes. The dedicated education unit (DEU) clinical education model uses a collaborative academic–service partnership to develop an optimal learning environment for students. The University of Portland adapted this model from Flinders University, Australia, to increase the teaching capacity and quality of nursing education. This article identifies DEU implementation essentials and reports on the outcomes of two replication sites that received consultation support from the University of Portland. Program operation information, including education requirements for clinician instructors, types of patient care units, and clinical faculty-to-student ratios is presented. Case studies of the three programs suggest the DEU model is adaptable to a range of different clinical settings and continues to show promise as one strategy for addressing the nurse faculty shortage and strengthening academic–clinical collaborations while maintaining quality clinical education for students.

Dr. Moscato is Tyson Distinguished Professor Emerita, School of Nursing, University of Portland; Dr. Nishioka is Senior Researcher, Education Northwest; and Dr. Coe is President, Cedar Lake Research Group, Portland, Oregon.

This study was supported by the Robert Wood Johnson Foundation Evaluating Innovations in Nursing Education Program. The authors thank Sherry Webb and Veronica Engle, University of Tennessee Health Science Center, College of Nursing; and Linda Steeg, Mattie Rhodes, Claire Meyers, Beth Nicastro, Grace Dean, and Susan Grinslade, School of Nursing, University at Buffalo, for their contributions to the case studies presented in this article. The authors also thank Peggy Hewlett, Dean, University of South Carolina, College of Nursing, for her help in clarifying the essentials of the dedicated education unit concept.
